- MS Office

About Me

Information Technology student at Bulacan State University actively building a strong foundation across software development, systems integration, and IT operations. Eager to explore new technologies, learn modern programming frameworks, and expand my overall technical knowledge. Passionate about understanding how different systems work together to deliver end-to-end solutions. Driven by technical curiosity, adaptability, and a strong desire to grow through diverse, real-world industry challenges.

Project & Experience

October 2026 - Present
Team Project
Sari-Sari Store Management System

- Developed a store management web application using React, TypeScript, and Firebase.
- Built features for point-of-sales, inventory, customers, suppliers, sales reports, and utang tracking.
- Implemented user authentication and cloud data storage with Firebase Authentication and Cloud Firestore.

July 2026 - October 2026
Capstone Project
JollyIsland

- Engineered an end-to-end IoT playtime tracking system for indoor play center using ESP32 gate microcontrollers and wireless haptic pagers.
- ·Built the administrative web dashboard utilizing React.js, TypeScript, and Tailwind CSS.
- ·Assembled hardware prototypes involving active ESP32, RFID readers and Paging Device.

January 2026 - March 2026
Team Project
SMNHS Library Management System

- Developed a libraryportal using Reactand TypeScript, with separate interfaces for students, teachers, and librarians.

Language

- English
- Tagalog

- Built PHP API functionality for book catalog management, borrowing and returns, reservations, user accounts, announcements, and notifications.
- Connected the application to a MySQLdatabase for libraryand account records.
- Integrated email notifications and an AI chatbot with Ollama, with optional GeminiAPI support.

Personal Project

Web Portfolio

- Designed and built a responsive personal portfolio website to showcase technical projects and hardware builds.
- Developed utilizing HTML, CSS, JavaScript, and React, managing version control via GitHub and deploying continuous updates through Vercel.
